

## AUTOMATED PRODUCTION

Benefit from our long-standing know-how as well as modern, automated production facilities.

## 17 INJECTION MACHINES

- Injection weights ranging from 0.1 g through to 105 g
- Clamping forces ranging from 25 tons through to 50 tons

## PACKAGING FACILITIES

- Product line packaging facilities with only 4 different items
- Pouch packaging facilities with tab flaps / label affixing

Fritz Wolf

# SPECIALISTS IN PLASTIC-INJECTION MOULDING

WITH INNOVATIVE TALENT AND VERSATILITY

Fritz Wolf GmbH offers a full range of curtain rail accessories. But that's not all!

We have evolved into a specialist for small plastic parts. From gears for products in the furniture industry and plastic parts for medical technology through to highly complex small technical parts for electrical engineering, we make anything that can conceivably be made out of plastic in the small parts field.

It is not just by chance that our traditional family-owned company has made this transition to plastic injection moulding specialist beyond Germany's borders. It is thanks to the specific requirements and individual solutions that drive us every day.

## CUSTOM-MADE FROM A SINGLE SOURCE

FriWo offers you the complete value chain for small plastic parts from a single source. From small batches to large series.

### CONSULTING AND DESIGN

You outline your problem or your expectations and we develop and test the ideal economic and technical solution for you.

### TOOL-MAKING

It often all comes down to the perfect tool, which we manufacture with long-standing partners and over 60 years of know-how. We work closely with you to develop it, from design right through to completion.

### PRODUCTION

We turn numerous tons of different plastics into intermediate and end products every year. 14 modern injection molding machines manufacture them in fully-automated processes with strict quality control.

### PACKAGING AND LOGISTICS

High-tech packing machines allow us to sort, collect, and pack your products. Your plastic molded parts are stored in our warehouses or delivered just-in-time directly to your production line.
