

SUSTAINABILITY IS OUR THING

FOR THE ENVIRONMENT
FOR THE ECONOMY
FOR HUMANKIND

PLASTICS PROCESSING

FOR THE ENVIRONMENT

- We live and breathe circular economy values and aim to reduce our residual waste to a minimum by 2030
- Our long-term approach is based on recycling material, partly recycled raw materials, and minimizing packaging
- Our heat recovery system warms production buildings, storage facilities, and assembly areas
- We will soon be harnessing the power of the sun to feed our electricity thanks to a new state-of-the-art photovoltaic system
- All-electric machinery in part enable us to save energy and avoid excess
- We keep our supply chains short and as a result our carbon footprint small

FOR THE ECONOMY – MADE IN GERMANY

- We focus on raw materials from within Europe – meaning secure supply chains
- Our partners in the region and throughout Germany have worked with us for many years – meaning stable supply relationships and short delivery times
- Our machinery and production are highly modern and efficient – meaning consistent quality and competitive prices

FOR HUMANKIND

- Our staff join us to stay
- We have been manufacturing in the same location for around 70 years
- Our partners and suppliers have grown with us and provide us with planning efficiency
- Our region makes us strong, deserving our commitment and long-term investment
