Reference: Click Bond Bonded Fastener Longevity

To Whom It May Concern:

With reference to the installation of Click Bond adhesive-bonded mounts, studs, and standoffs as described in the process specification CBPS-244, this letter is to confirm the anticipated longevity of the properly installed product.

Correctly specified and installed with a suitable adhesive, Click Bond adhesive-bonded mount, stud, and standoff products have an anticipated serviceable life expectancy of greater than thirty (30) years in the marine environment, provided each of the following conditions are met:

- Products are installed in accordance with installation instructions CBPS-244 as provided by Click Bond, Inc.
- Products are installed by mechanics properly trained in the installation techniques specified in CBPS-244.
- The environmental and loading conditions of the application are not in exceedance of the design guidelines stated in CBPS-244.

This statement is supported by results of accelerated aging testing of the components and recommended adhesives, as well as through the experiential history of naval and marine applications of these products, including installations on United States Navy vessels, some now exceeding fifteen years in service.

Sincerely,

Ian Newberry
European Sales Manager
