WORKHOLDING SOLUTIONS

SPECIALTY FASTENERS

LIFTING SOLUTIONS

©2024 JERGENS, INC | JERG0224

RUGGED AMERICAN MADE QUALITY

Jergens hoist rings are made the way they should be: right here in the USA, starting with domestically-produced certified alloy steel. Choose Jergens and get tough, dependable, American-made quality every time.

JERGENS QUALITY

Our quality control procedures define the entire manufacturing process and provide complete traceability from raw materials to finished product. Our state-of-the-art, 110,000 square foot facility is AS 9100 Rev D/ ISO 9001:2015 certified. Finally, All hoist rings conform to: (OSHA) 29 CFR 1918, ANSI/ASME B30.26, MIL-STD-1365C, MIL-STD0209K.

Jergens, Inc is a proud supplier to leading companies in the following industries:

- Transportation
- Military/Aviation
- Manufacturing
- Metalworking
- Material Handling
- Recreation
- Entertainment

Company Information

Jergens Company Profile

Jergens Inc. was founded in 1942 by Jack Schron, Sr. and his father Christy, to provide standard components for building jigs and fixtures. Today the fourth generation of family involvement continues stronger than ever. The company currently operates as three separate divisions: Jergens Manufacturing, ASG, Division of Jergens, Inc., and Acme Industrial Company. While all divisions are vital to the Jergens family, the manufacturing division is the centerpiece of our capabilities. In June 1999, Jergens moved into a new 110,000 square foot facility and prides itself by manufacturing over 80% of its product offering, as well as setting the standard for producing the highest quality components in our industry.

Jergens Manufacturing now comprises 3 distinct business units: Workholding Solutions, Lifting Solutions and Specialty Fasteners. Building on its reputation of uncompromising quality standards, Jergens is committed to helping its customers achieve leaner, more profitable manufacturing, and continues to add products and engineered solutions for an integrated approach to "Manufacturing Efficiency."

Today, you'll find our tooling components, fasteners and hoist rings at work in just about every industry on every continent. And our innovative Quick Change Workholding Solutions like Ball Lock® Mounting System have changed the way manufacturers worldwide think about productivity.

Jergens actively supports global, multinational and internationally based customers with metric dimensioned product offerings as well as many inch threaded products that are common in aerospace and industrial applications around the world. In important manufacturing markets in Canada, Europe, Asia and Latin America, Jergens representatives and stocking distributors have represented Jergens for more than 30 years. Our international representatives are trained technically on our products and provide expertise to customers and sub dealers in applying Jergens technologies to local industries. In recent years, two wholly owned affiliates were formed to serve the Chinese and Indian markets. Jergens (Shanghai) Commercial Co., Ltd, opened in 2006 and Jergens India Private Ltd., Navi Mumbai India opened in 2009. These fully registered trading subsidiaries employ trained multi-lingual engineers and commercial managers who provide marketing and importing, warehousing, distribution and technical support to our customers, distributors and local representatives.

Acme Industrial, located in Carpentersville, Illinois, is a premium manufacturer of precision drill bushings and keylocking thread inserts. Our ASG Division specializes in products for light assembly ranging from torquecontrolled electric screwdrivers to automation systems.

In addition to our unique product designs, we lead the industry with unparalleled customer service and delivery. Our website is a good example of our commitment to be the most innovative company in our industry. Customers and distributors can check stock and order on-line, view the Jergens catalog, and even download 2D, 3D and solid model CAD drawings in a variety of formats. Visit our website at www.jergensinc.com for the latest news and product information, as well as links to our other divisions. The Jergens family thanks you for your business.

Distribution of Jergens Products

Jergens is proud to be represented by a network of qualified distributors throughout the world. If you do not know the name of the distributor nearest you, please call Jergens Customer Service at 1-877-486-1454 or visit www.jergensinc.com/sales-rep-locator.

Quality Policy

Jergens, Inc. manufactures and supplies only *quality* products. Our quality system is AS 9100 Rev. D / ISO 9001:2015 Certified. Center-Pull and Side-Pull Hoist Rings are CE Certified. If there is a problem with any of our products, please contact your local Jergens Distributor or contact our Customer Service Department.

Design Aids

Jergens, Inc. offers several CAD drawing formats for use in fixture design. Our website (www.jergensinc.com) offers our complete catalog with hot links to CAD drawings on most of our products. We also offer 3D solid models of our products via the internet.

Application Assistance

Jergens Inc. maintains a complete Technical Sales Department to work with you. Please feel free to call upon their knowledge and experience. Application videos are available for the Lift-Check™, Center-Pull Hoist Rings and various other products at www.jergensinc.com or www.youtube.com/users/jergensinc.

Engineering Changes

Product improvement is a continuing process at Jergens, Inc. Specifications and engineering data are subject to change without notice. **If current information is critical to your design, it is suggested that you contact the Jergens Customer Service Department, or download the most current drawing from our website*, to verify any dimensions or specifications.**

Bar Coding

Jergens' boxed and bagged products are fully bar coded for automatic identification. The bar code labels contain the ASCII Code 39 format, which was chosen as being suitable for most bar code readers. Jergens' bar codes will identify part numbers and manufacturer's codes.

Specials

Jergens, Inc. will modify any item that is similar to our standard component parts. Please contact your Jergens Distributor with your request for a quote. Prints or sketches should be furnished if possible.

Alloy Steel - 4140 or equivalent

Low Carbon Steel - Free Machining 1215, 1018, or equivalent

52100: QQS-624

Zinc Plate: ASTM B633, Type V, VI, Class FE/ZN 5

Cadmium Plate: AMS-QQ-P-416, Class 3, Type 1

Black Oxide: MIL-DTL-13924 and AMS-2485

Anodize: per Mil. Spec. MIL-A-8625, Type II, Class 2 and AMS-2472

Passivate: AMS 2700

Alternate Finishes available upon request.

Electroless Nickel Plating

Envirolox: AMS 2404, AMS-C-26074, Mil-C-26074

Temp Range: Min -20°F (-28°C), max 400° F (204°C) for Alloy Steel

Magnetic Particle Inspection: ASTM E1444

Stainless Steel

- 316 (Swivel Eyebolts)
- 17-4PH (Stainless Steel Traditional Center-Pull, Stainless Steel Forged Center-Pull)

* 3D Solid Models are available in multiple formats from www.jergensinc.com

Engineer The Lift!!

- Jergens recommends the use of swiveling and pivoting hoist rings.
- Conventional eye bolts should be used for straight vertical lifts only.
- Are you using the proper hoist ring for the application?
- Is the hoist ring free to swivel and pivot? Any movement restrictions?
- Are lifting hole(s) in the proper location?
- Do you have the correct hole size for the hardware - safe lift capacity?
- Are the holes tapped deep enough to ensure full thread engagement?
(See figure #4 on Installation Information; page 5.)
- Recommended thread depth:
Steel – 1-1/2 times the bolt diameter (min.)
Aluminum – 2 times the bolt diameter (min.)
- **RULE OF THUMB, IF IN DOUBT – DON'T!!!**

Applied Load Changes With Sling Angle

Jergens swivelling hoist rings are designed and rated to be pulled at any angle at the rated load unless otherwise specified.

However, the applied load on a multipoint lift will increase if the sling angle is less than 90°.

So be sure to consider the sling angle when selecting lifting equipment. See illustration below.

Sample Calculation:

Sling Angle (Degrees)	Applied Load (Pounds)
90	1000
75	1040
60	1155
45	1410
30	2000
15	3860

DO'S

1. Observe working load limitations (be especially careful with eyebolts used for angle lifts – see sling angle chart).
2. Visually inspect hoist ring prior to use.
3. Fully tighten hoist ring to recommended torque. Full thread engagement is required (no space between swivel bushing and lift).
4. Ensure proper thread depth - do not shim.
5. Make sure hoist rings have free travel - it must swivel and pivot without restrictions.
6. When installing in soft metal, such as aluminum, the minimum effective thread engagement should be two times the diameter of the thread (1-1/2 times bolt diameter – steel).

DON'TS

1. Never pull a Center Pull Style hoist ring bail from the side.
2. Never use an oversized hook in eyebolts or hoist rings (See figure #1 on Installation Information; page 5).
3. Never use excessive sling angle.
4. Never steam clean or degrease hoist rings (could cause rusting and binding).
5. Never apply shock loads.
6. Never allow the side of a hoist ring to make contact with the lift. (See figure #2 on Installation Information; page 5.)
7. Never alter hoist rings.

Installation Information

Select the proper Hoist Ring for the job. Do not attempt to apply more than the rated load capacity. *The load capacity is marked on the Hoist Ring.*

Drill and tap the workpiece so that the hoist ring bolt is installed perpendicular to the surface of the workpiece. Countersink the tapped hole to prevent “swelling” of the top thread when the hoist ring bolt is torqued. The workpiece surface must be flat, providing complete contact for the hoist ring bushing.

Do not use spacers between the hoist ring bushing and the workpiece surface.

When installing in soft metal, such as aluminum, the minimum effective thread engagement should be two times the diameter of the thread. When installing in steel, thread engagement should be 1-1/2 times the thread diameter.

Load rating may be reduced if parent material is under 80,000 PSI ultimate tensile strength.

Always *tighten the bolt to the proper torque value*, which is stamped on the Hoist Ring.

Loosening of the *bolt* may develop during use. *Re-tightening to the required torque must be done whenever the bolt loosens.* The proper tightening torque is stamped on the Hoist Ring.

When lifting, apply force gradually. **DO NOT APPLY SHOCK LOADS.**

For through-hole applications, be sure that nut/washer are the same quality grade as the Hoist Ring.

Periodic visual inspection and pull testing is recommended as damage can occur from improper usage.

Always read and understand safety and installation information supplied with each Hoist Ring.

Never use a hook or other lifting device which will pry or tend to open the “U” shaped bar on Center-Pull Hoist Rings!

Fig. 1

After installation, check the hoist ring to be sure it swivels and pivots freely in all directions. **The side of the ring must not contact anything!**

Fig. 2

Never pull U-Bar from a side!

Fig. 3

Always ensure full thread engagement when installing hoist rings!

Fig. 4

Depending upon the sling angle, **the applied load may be more than the weight being lifted.** Two point lifting of a 2000 pound weight, with a sling angle of 30°, will result in an applied load of 2000 pounds to **each** hoist ring!

Fig. 5

Pivot point must be above the bolt axis!

Fig. 6

Traditional Center-Pull Hoist Rings

- Full 360° Swivel and 180° Pivot Action
- Rated at 5:1 Strength Factor
- Material: Alloy Steel
- Finish: Black Oxide (Except Washer)
- U-Bar, Bolt, Pins, Base, Washer and Bushing are Magnetic Particle Inspected
- Washer: Zinc Plated with Gold Colored (Inch), Clear/Blue (Metric) Conversion Coating
- Proof Tested to 200% of Rated Load Capacity
- Certificate of Proof Test provided (See sample on page 32)
- Made in U.S.A.
- 3D Solid Models available in multiple formats from www.jergensinc.com
- Available with Envirollox™ protective finish See page 26 for more information
- Conforms to ASME B30.26 and MIL-STD-209K
- Temp Range -20°F (-28°C) to 400°F (204°C)
- Available in 17-4PH Stainless Steel (up to 5,000 lbs/2,150 kg) See page 8-9

All dimensions are in millimeters.

¹ Stated load capacity based on recommended thread torques as shown in chart.

² It is recommended that these torques be used when installing hoist rings.

³ Available from stock as Standard Clevis.

* Rated load may be reduced at 90° from vertical.

† Square base.

Stainless Steel Traditional Center-Pull Hoist Rings

Introducing our 17-4 PH Center-Pull Style Hoist Ring! Another option for the most popular style in the market. Not only do you get the environmental protection of stainless steel, but you will also see the same load capacity as the alloy steel version.

- **Material:** 17-4 PH Stainless Steel
- Same strength/load capacity as alloy steel
- Capacities up to 5,000 lbs
- Inch and metric styles available
- Made in U.S.A.
- 3D Solid Models available in multiple formats from www.jergensinc.com
- Magnetic Particle Inspected
- Rated at 5:1 strength factor
- 360° Swivel, 180° Pivot
- Proof Tested 200%,
Proof Test Certificate Provided
- 17-4 PH Stainless Steel hoist rings:
32°F (0°C) to 600°F (316°C) continuous or up to 800°F (426°C) intermittent. Sub-zero temperatures are not recommended for hoist rings made of the material in this condition.

Shackle-Lok™ Hoist Rings

Shackle-Lok™ combines the strength of a hoist ring with the versatility of a shackle. Its unique, 3-piece design is ideal for use with a variety of lift methods, and shackles are interchangeable. Shackle-Lok™ is simply the industry's most efficient below-the-hook lifting device from a weight to load rating ratio.

The Shackle-Lok™ was designed to work with numerous thread sizes. Any straight thread size, pitch, or length can be manufactured to meet application needs.

- Internal ball bearings allow for smooth rotation under load
- Full 360° swivel and 180° pivot action
- Easy to remove shackle
- Rated 5:1 strength factor in line with bolt axis pull.
For other than in line with bolt axis pull, reduce rated load by 30%
- Material: alloy steel
- Bolt and base finish: black oxide
- Bolt and base are magnetic particle inspected
- Shackle finish: zinc plated with gold colored conversion coating
- Proof tested to 200% of rated load capacity
- Certificate of proof test provided
- Made in U.S.A.
- 3D Solid Models available in multiple formats from www.jergensinc.com
- Temp range -20°F to 400°F / -28°C to 204°C

Shackle Material: Carbon Steel

Shackle Type: IV A, Grade A, Class 2

Note: When tightening the bolt, the shackle and pin must be removed. Not intended for prolonged rotation

Forged Center-Pull Hoist Rings

Our Forged Center Pull Hoist Ring integrates a solid center brace lift bail into our most popular style product. This design eliminates the possibility of spreading the lift ring in misapplications. Forged hoist rings are ideal for OEM and industrial use.

- **Material: Alloy Steel**
- **Full (over center) 360° swivel and 180° pivot action**
- **Capacities up to 30,000 lbs/13,500 kg**
- **Inch and metric**
- **5:1 strength factor**
- **Proof tested to 200% of rated load capacity**
- **Available in 17-4PH Stainless Steel (up to 5,000 lbs/2,150 kg) See page 14**
- **Made in U.S.A.**
- **3D Solid Models available in multiple formats from www.jergensinc.com**
- **-20°F (-28°C) to 400°F (204°C)**
- **Magnetic particle inspected**
- **Lifting Tooling Columns & Large Fixtures**
- **OEM Applications**
- **Lifting Die & Molds**

Stainless Steel Forged Center-Pull Hoist Rings

Our Forged Center Pull Hoist Ring integrates a solid center brace lift bail into our most popular style product. This design eliminates the possibility of spreading the lift ring in misapplications. Forged hoist rings are ideal for OEM and industrial use.

- **Material:** 17-4PH
- **Same strength/load capacity as steel**
- **Full (over center) 360° swivel and 180° pivot action**
- **Capacities up to 5,000 lbs**
- **Inch and metric**
- **5:1 strength factor**
- **Proof tested to 200% of rated load capacity**
- **Maximum operating temperature**
800°F Intermittent, 600°F continuous
- **Made in U.S.A.**
- **3D Solid Models available in multiple formats from**
www.jergensinc.com
- **Magnetic particle inspected**

Traditional Side-Pull Hoist Rings Precision Cast Body

- Rated at 5:1 Strength Factor
- Material: Alloy Steel
- Clevis, Ring, Bushing and Cap Screw are magnetic particle inspected
- Clevis is X-rayed
- Finish: Black Oxide
- Proof Tested to 200% of Rated Load Capacity
- Made in U.S.A.
- 3D Solid Models available in multiple formats from www.jergensinc.com
- Available with Envirolox™ protective finish See page 26 for more information
- -20°F (-28°C) to 400°F (204°C)

360° swivel plus pivot point moves around bolt to provide greater clearances in side lifting and when lifting rotating objects.

SP 2000™ Side-Pull Hoist Rings

The Jergens SP2000™ Side-Pull Style Hoist Ring is ideal for flipping fixtures, dies and molds. It swivels 360° and pivots around the center bolt providing the ring with greater clearances in side lifting applications and when lifting rotating objects. The hoist ring is low profile and has a unique bolt retention design. The oversized forged ring, and single piece forging, easily adapts to larger hoist hooks. Its relatively light weight makes it easier to handle than similar hoist rings and the installation is conveniently done with external wrenching (47531, 47532) or internal/external wrenching (all other sizes). All parts are made in the U.S.A.

- **Can Be Used for Top Lifting as well as side lifting applications**
Full Swivel & Pivot Action
- **Rated at 5:1 strength factor at any angle**
- **Material: Alloy Steel**
- **Finish: Black Oxide**
- **Proof Tested to 200% of Rated Load Capacity**
- **Made in U.S.A.**
- **3D Solid Models available in multiple formats from www.jergensinc.com**
- **-20°F (-28°C) to 400°F (204°C)**
- **Magnetic particle inspected**
- **Also Available in Lift-Check™ on pages 22-23**

Die-Flipping Hoist Rings

Building on the popularity of our SP2000™ and combining the shackle feature of our Shackle-Lok™ style hoist ring, the Die-Flipping hoist ring is the latest solution for your flipping needs. With its offset neck, it will help to clear die shoes, external plumbing, etc., to allow the unit to rotate and pivot as needed. It will swivel 360° as it is free to swivel around the center bolt, allowing greater clearances in side lifting applications where lifting and rotating of the objects is needed. Also available with Jergens' patented proprietary hex head cap screw Lift-Check™ bolt.

- **Material:** Alloy Steel
- **Body Finish:** Black Oxide
- **Shackle Finish:** Zinc Plated with gold colored conversion coating
- **Magnetic Particle Inspected**
- **Rated at 5:1 strength factor**
- **360° Swivel, 180° Pivot**
- **Proof Tested 200%, Proof Test Certificate Provided**
- **Temp Range -20°F (-28°C) to 400°F (204°C)**
- **Made in U.S.A.**
- **3D Solid Models available in multiple formats from www.jergensinc.com**
- **Available in Inch and Metric sizes**
- **CE Certified**
- **Conforms to ASME B30.26 and MIL-STD-209**

Lift-Check™ Center-Pull Hoist Rings

RED INDICATES
LOOSE

BLACK INDICATES
TIGHT

The Jergens Lift-Check™ hoist ring assures that your application is secure and ready to lift. The Lift-Check™ is comprised of a Jergens' patented proprietary hex head screw which integrates the Visual Tension Indicator.

Patented Lift-Check™ Center Pull and Forged Style Hoist Rings are rated at 5:1 strength Factor & Proof tested to 200% of rated load capacity, certificate of proof test provided, in accordance with ASME B30.26. Visual Tension Indicator confirms engagement – clearly illustrates whether bolt joint is loose or tight. Ensures safety and provides accuracy of +/- 10% of designed tension. Hands-free inspection at a distance, prior to the lift. Reduces installation time. No torque wrench or calibration needed. Lift-Check™ bolts are reusable and provide reliable visual indication of joint clamping force. Bolt kits available for Jergens hoist ring upgrades.

- **Material:** Alloy Steel
- **Finish:** Black Oxide
- **Washer:** Zinc Plated with Yellow Chromate Coating (Inch), Clear/Blue Conversion Coating (Metric)
- **U-bar, Bolt, Pins, Base, Washer and Bushing** Magnetic Particle Inspected
- **Rated at 5:1 Strength Factor**
- **Made in U.S.A.**
- **3D Solid Models** available in multiple formats from www.jergensinc.com
- **Full 360° Swivel and 180° Pivot**
- **Conforms to ASME B30.26 and Mil-STD-209K**
- **Temperature variations may apply** (-20°C to 75°C / -4°F to 168°F)
- **No torque wrench or calibration required, thus reducing installation time**
- **The Lift-Check™ hoist ring visual tension indicator confirms engagement—clearly illustrates whether the bolted joint is loose or tight**
- **Hands-free inspection at a distance, prior to the lift**
- **Proof Tested to 200% of rated load capacity**
- **Available in inch and metric sizes**
- **U.S. Patent No. 10,950,174**

Lift Check™ SP2000™ Side-Pull Hoist Rings

RED INDICATES
LOOSE

BLACK INDICATES
TIGHT

The Jergens SP2000™, Patented Lift Check™, Side-Pull Style Hoist Ring is ideal for flipping fixtures, dies and molds. The hoist ring is low profile and has a unique bolt retention design. The oversized forged bale easily adapts to larger hoist hooks. Its relatively light weight makes it easier to handle. This hoist ring assures that your application is secure and ready to lift. The Lift-Check™ is comprised of a Jergens' patented proprietary hex head screw which integrates the Visual Tension Indicator which confirms engagement – clearly illustrates whether bolt joint is loose or tight.

- **Material:** Alloy Steel

Lift-Check™ Die-Flipping Hoist Rings

Building on the popularity of our SP2000™ and combining the shackle feature of our Shackle-Lok™ style hoist ring, the Die-Flipping hoist ring is the latest solution for your flipping needs. With its offset neck, it will help to clear die shoes, external plumbing, etc., to allow the unit to rotate and pivot as needed. It will swivel 360° as it is free to swivel around the center bolt, allowing greater clearances in side lifting applications where lifting and rotating of the objects is needed. Also available in standard style. **The Lift-Check™ hoist ring visual tension indicator confirms engagement - clearly illustrating whether the bolted joint is loose or tight.**

- **Material:** Alloy Steel
- **Body Finish:** Black Oxide
- **Shackle Finish:** Zinc Plated with gold colored conversion coating
- **No torque wrench or calibration needed**
- **Hands-free inspection at a distance, prior to the lift**
- **360° Swivel, 180° Pivot**
- **Made in U.S.A.**
- **3D Solid Models available in multiple formats from www.jergensinc.com**
- **Rated at 5:1 strength factor**
- **Proof Tested 200%, Proof Test Certificate Provided**
- **Magnetic Particle Inspected**
- **-4°F (-20°C) to 168°F (75°C)**
- **Available in Inch and Metric sizes**
- **CE Certified**
- **Conforms to ASME B30.26 and MIL-STD-209**

Envirolox™ Protective Finish

The Envirolox™ Protective Finish is a *proprietary nickel based coating that helps to prevent rusting and other environmental hazards from affecting Jergens Hoist Rings*. This coating does not contain cadmium or chromium, is *environmentally friendly*, and is proven to be *effective in extreme conditions*. It provides surface hardness, lubricity and more effective corrosion protection than paints. Envirolox™ Protective Finish is available on Jergens Center-Pull and Side-Pull Style Hoist Rings. It is not recommended for the Swivel Eyebolt or the SP 2000™ products.

- Available on Center-Pull and Side-Pull Traditional Style (See pages 6-7 and 15 for part numbers.)
- Available upon request for other selected Jergens lifting products.
- Added resistance to rusting.
- Environmentally safe.

Hoist Ring Hold Down Clips

Two or more Hoist Ring Hold Down Clips should be used to prevent ring movement when the hoist ring is not in use. These simple spring steel clips prevent ring movement, provide an additional safety feature when used around machine tools and give a neat finished appearance.

- Material: Spring, Steel
- Finish: Cadmium or Zinc

Swivel Eyebolt

The Jergens Swivel Eyebolt™ lifting product has a full swivel and pivoting action that allows for the flipping and turning of the part without unhooking. The patented tamper resistant design is ideal for permanent mounting on OEM applications or on molds, dies and fixtures.

- **Tamper Resistant Design**
- **Swivels 360°, Pivots 180°**
- **Eliminates Bending (of Eyebolt) Problem**
- **Forged, Oversized, One-Piece Lift Ring**
- **Rated at 5:1 Strength Factor**
- **Load Capacities to 4,000 lbs/2,000 kg**
- **Economically Priced**
- **Material: Alloy Steel, or 316 Stainless Steel**
- **Finish: Black Oxide, or Passivated (SS)**
- **3D Solid Models available in multiple formats from www.jergensinc.com**
- **Made in USA**
- **Magnetic particle inspected – alloy steel only.**
Liquid penetrant inspection for Stainless Steel version

Pivoting Lift Ring

The Jergens Pivoting Lift Ring is a low profile lifting device that pivots 180°. It is one of the most economical lifting devices available and is ideal for applications that do not require a swivel action. This Lift Ring is easy to install and is available in five sizes. Load ratings range from 2,000 - 20,000 lbs. The product is manufactured from alloy steel, heat treated and magnafluxed.

- **Base:** Precision Machined Alloy Steel
- **Ring:** Alloy Steel forging, heat treated, magnafluxed and certified
- **Finish:** Black Oxide
- **Rated at 6:1 Strength Factor**
- **3D Solid Models** available in multiple formats from www.jergensinc.com
- **Made in USA**

• Stated load capacity with SHCS per ASTM A574/A574M

- **Material:** C-1030 Forge
- **Finish:** Mill
- **Thread:** 6g

MADE IN THE
USA

All dimensions are in millimeters.

Quality Standards Center-Pull and Side-Pull Style Hoist Rings

Load Bearing Member Components

- All material is domestically manufactured certified alloy steel.
- All components are machined prior to manufacture to remove any surface defects.
- All components are heat treated and certified to manufacturing specifications.
- Bolts are:

Inch	Thread Class	Metric	Metric Thread Class
Socket Screw per ASTM A574	Up to 1" 3A	Class 12.9	Class
Tensile Strength	Over 1" 2A	Tensile Strength	Class 6g
-180,000 psi - 1/2" or Smaller		-1220 MPa	
-170,000 psi - Over 1/2"		- (177,000 psi)	
100% Magnetic Particle		100% Magnetic Particle	
Inspected to ASTM E709-15		Inspected to ASTM E709-15	
& ASTM A574		& ASTM A574M	

- All other load bearing components are magnetic particle inspected based upon ASTM E709-15 and MIL-STD-1916 with zero defects permissible.
- Bolt torque and hoist ring load limit permanently marked on hoist ring.
- AS 9100 Rev D / ISO 9001:2015 Certified.

Individual certificate of proof-test accompanies Center-Pull and Side-Pull Style hoist rings in final packaging.

 CERTIFICATE OF PROOF TEST					
(1) Distinguishing Mark	(2) Description of Item Tested	(3) Quantity Tested	(4) Date Tested	(5) Load Applied	(6) Rated Load
(7) Name and Address of Supplier:		Jergens Inc., 15700 Waterloo Rd., Cleveland, OH 44110			
(8) Name and Address of Company performing test:		Jergens Inc., 15700 Waterloo Rd., Cleveland, OH 44110			
(9) Position of Signatory in Company:		Quality Assurance Supervisor			

We hereby certify that Jergens Inc. test procedure requires all hoist rings to be proof tested and examined; and that this form is evidence that the test operator completed all procedures as required.

Jergens Inc. certifies that all hoist rings have been proof tested and examined in accordance with Jergens QSWI 3.10 and that this test completes all procedures as required.

(Signature)

In substantial agreement with (OSHA) 29 CFR 1918, ANSI/ASME B30.26, MIL-STD-1365C, MIL-STD-209K

Quality Standards For Center-Pull and Side-Pull Style Hoist Rings

Assembly Data

- Center Pull and Side Pull hoist ring assemblies are pull-tested and certified to 200% of rated load capacity and stamped with identifying date code.
- All hoist rings are designed for 5:1 strength factor.
- Hoist rings with washers are color coded for easy identification: gold washer denotes inch sizes, silver/clear blue washer denotes metric sizes.
- Finished assembly is black oxide (with the exception of the washer).
- The Jergens name or logo is prominently displayed on assembly for identification of original manufacturer.
- Special plating or marking is available upon customer's request.
- Proper warning label is affixed to each clevis.
- Proof load testing, magnafluxing and heat treating are on file at Jergens, Inc.
- Material Certs available for nominal cost and must be requested with initial order.
- The finished hoist ring product is individually boxed.

NOTE: Specifications for side pull style hoist rings are identical to center pull style with the exception that the clevis is of precision cast alloy material which is serialized and conforms to X-ray specifications.

Contact Jergens for quality standards on all other lifting products.

We Are Jergens

WORKHOLDING SOLUTIONS

SUPPORT, LOCATE AND HOLD:

From standard components to vises and quick change fixture systems like Ball Lock®, ZPS and Fixture-Pro® Multi-Axis.

SPECIALTY FASTENERS

FASTEN, STRENGTHEN AND SECURE:

From threaded inserts and toggle clamps to Kwik-Lok® Pins.

LIFTING SOLUTIONS

LIFT, TURN AND TRACK:

From chain sling and eye bolts to hoist rings and our proprietary Lift-Check™ hoist rings.

We got our start back in 1942, manufacturing tooling components to help American manufacturers operate quickly and more efficiently. “The Standard Components with the Highest Standards.” This founding philosophy put Jergens on the forefront of the “lean manufacturing” movement before anyone even thought to put those two words together.

In the years since, Jergens has structured its offering to advance the cause of leaner manufacturing, adding products and engineered solutions for an integrated approach to “Manufacturing Efficiency.”

You can find Jergens products just about anywhere in the manufacturing environment.
